WELCOME TO BEN NEVIS

Firstly let's acknowledge the drought and applaud the role that social media has played in documenting where we are, and more importantly letting people know they are not alone. We'd all really like a change of scenery though so looking forward to pictures of mud, green grass and fat cattle anytime soon.

Beef prices domestically are set to soar. This means the cows you have worked so hard on are especially valuable, and with a ground shift in markets finally starting to differentiate between high quality and hamburger beef, it's a good time to shift into a higher gear.

GROUND SHIFTS IN MARKETS TOWARDS MARBLING

The fastest growing and most lucrative markets in the world hold a box seat for the top end of the Angus breed. Most notably these include the growing middle class of China and Japan who cannot get enough of the branded Angus B3-5 and Angus Wagyu F1 products. This represents an important shift away from the B8-10 product in Japan to find a sweet spot between taste, quality, affordability and health.

For the last 20 years we have been diligently folding marbling into our breeding program because we know it leads to a better eating experience and will ultimately reward us and our clients.

There are people there who don't value old fashion standards like type, temperament, skin and constitution but we do. It would have been easier to chase marbling and EBVs in general without these standards but that has been our choice, and that is our difference. Our pursuit is excellence in all these areas and we believe it is not only attainable but extremely worthwhile to go the extra mile.

GENOMICS

This year's bulls have genomically enhanced EBV's with the latest One-Step Technology to give buyers the best ever information on them combined with the usual contemporary group data for scanned carcase traits and ADG that we provide.

Only 5% of stud breeders have utilised BREEDPLAN's new One Step Technology so far but it will quickly gain traction. This is because it gets away from the averaging system of the old BREEDPLAN, and better credits the animals with individual performance and where they sit exactly on the genetic bell curve. As a result we have been able to identify outcross bloodlines that marble, which has been very exciting for us.

In the past we had difficult identifying marbling bloodlines that weren't a compromise for other important traits but are now seeing massive opportunities.

This year the Ben Nevis catalogue will feature some of the breed's highest indexing and most sought after genetics for growth and marbling, all backed by the solid foundations of the Ben Nevis cow herd which was established in 1947. They sell ready to work and will average a hefty 600kgs for the yearlings and over 750kgs for the 18 month olds at the time of sale.

Erica and Stu Halliday

THIS YEAR'S BULLS

THERE HAS NEVER BEEN A BETTER TIME TO INVEST IN QUALITY

THE BULLS

We are very proud of this year's bulls. Genomics has recalibrated our EBVs and our \$ Index and growth figures have risen significantly. This has largely been because of the trust we have placed in the history of our herd and the focus we have placed on the elite animals within it that have excelled for growth and scanned IMF within their contemporary groups. Given our commitment to type, we feel very positive about our direction and the value that we can add to our clients' herds.

There will be seventeen 18 month old bulls and sixty one 12 – 14 month old bulls in the catalogue. Our Fire-Ice breeding program of combining power with carcase is working really well for us, with a number of stud sire prospects throughout the sale.

As always, we have kept semen on a number of bulls to progeny test in our commercial herd. We guarantee the bulls and have rigorously culled them for temperament and feet.

For the fifth year running we have used bulls who have tested at the top of the Angus Progeny Test. They have been proven to excel for carcase quality and growth, as well as leaving the cowman's (woman's) kind of breeding female behind.

200 TOP PICK HEIFERS

These are the top-pick 125 heifers of our commercial herd plus 75 heifers from the Kanimbla herd of Hyde Thomson, whose family have been using our genetics for nearly 50 years. They represent an unprecedented opportunity to invest in the heart of our program, which has always attracted premiums in the market place. Spring drop and ready to join. Vaccinated with 7 in 1, pestiguard drench, yard weaned and bunk, dog, bike, horse, calm man and mad woman trained. Ben Nevis 120, Kanimbla Ben Nevis blood heifers 75.

OUR INDUSTRY FOCUS

We have focussed our breeding efforts on satisfying the insatiable and exponentially growing demand for the highest quality beef in China and Japan, while maintaining a profitable and efficient cow herd that are a pleasure to work.

This has meant selecting for growth and IMF, while culling for temperament and feet. We very simply treat all animals the same and multiply those that thrive in our grass conditions. We know that marbling is a key profit driver but not at the expense of all the other traits that have made our breed so successful. Our progress has been deliberate and measured.

Similarly we know as an industry we need to improve turnover and so have focussed on animals that grow, finish and marble faster.

WHY RAW DATA?

The academic purists get upset when we include raw data. Our logic is this- When everything is treated the same it is important to us which ones do the best especially for IMF and growth. This is, after all, the basis of BREEDPLAN. If an animal says it is in the top 5% of the breed for IMF EBV we like to check that it performed in a commensurate way within its contemporary.

WHY SCANNING?

Scanning is the most commercially viable and time effective way to measure carcase traits because you don't have to kill the animal to get it, and it's easily measured when they are yearlings and in good enough condition. In heifers there is a correlation of .7 between scanned IMF and carcase marbling score. This is meaningful and very useful.

In most bulls that correlation drops to .4. The issue here is that many bulls when they are scanned don't have enough fat on them to scan so they have not yet expressed marbling and the differences are not evident. This is not the case with our yearling bulls as most average over 6 mls of fat.

We scan at 10 – 12 months and are aware there are some bulls that will marble later on but it has not yet been triggered. However we are targeting the ones who express marbling earlier as well as the actual levels of marbling they achieve. These will be the animals who, in the future, will reach their targets more quickly and reduce costs while increasing turnover. We consider this very valuable information as we aggressively target the premium high marbling markets.

PREPARATION

The bulls were early weaned using the innovative AIM protocol at four months because of the drought. Due to Stu's dogged determination, they have had the only feeble oats crop in about the whole of the New England. They have been supplemented with a hay-based mix with small amounts of well balanced, buffered grains and minerals. We are very proud that we have been able to present them to express their genetic potential and have them fit, strong and well grown, ready to go straight to work.

We are happy to blood bulls and give three day vaccine for bulls sold to Queensland and will work in with you for the best delivery time so they adapt.

SALE INFORMATION

SALE DATE AND PRIOR INSPECTION TIME

The annual Ben Nevis Angus Sale will take place on Thursday 13 September 2018. Undercover shelter is provided.

10.00am – Inspection

Bulls may be inspected from 10.00am on the morning of the Sale, or at any other time by arrangement with the agents or vendors.

12.30pm – Ben Nevis Blood Heifer Sale

The heifers will be top-quality, front-paddock heifers and will be preg tested empty. Vendors will be Ben Nevis Angus – 120 heifers that can be viewed on-site (the top pick of the commercial herd) and Kanimbla Grazing Ben Nevis blood – 75 heifers.

1.00pm – Ben Nevis Angus Yearling Bull Sale

78 yearling Angus bulls.

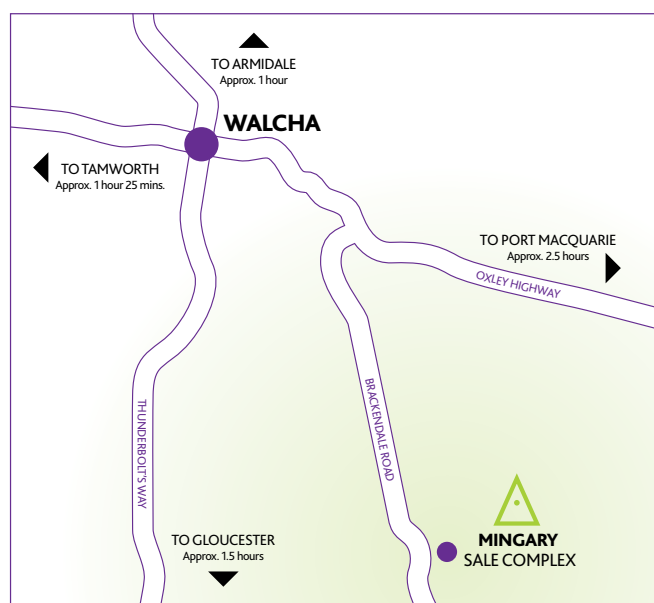

SELLING SYSTEM

Sale of the bulls will be conducted under normal auction conditions. Sale of the heifers will be conducted by AuctionsPlus with live bidding (NOT Helmsman). Please check with the Selling Agents to obtain a buyer's number if you are considering making a purchase. Successful purchasers are requested to give written advice to the Selling Agents regarding transport arrangements at the conclusion of the Sale.

HOW TO GET TO THE MINGARY SALE COMPLEX

From Walcha take the Oxley Highway and head east towards Port Macquarie. Approximately 4kms out of Walcha turn right onto the Brackendale Road.

The Mingary woolshed and yards are approximately 6kms along the Brackendale Road on the left hand side, and will be well sign posted on Sale day!

FREE DELIVERY

We will provide free delivery to major centres in New South Wales, the Australian Capital Territory, Victoria, South Australia, the Northern Territory and Queensland. If you purchase three or more bulls we will deliver free of charge to your door. Please contact us directly to arrange.

REBATE

2% rebate to outside Agents registering BULL BUYERS, in writing, '24 hours' PRIOR to the Sale and settling on their behalf within seven days of the date of Invoice.

PHONE BIDDING

The Sale will also be on AuctionsPlus or contact the Selling Agents.

CATERING

Catering will be supplied by Walcha Junior Rugby – including steak and sausage sandwiches, tea, coffee and cold drinks.

PHYSICAL EXAMINATION OF BULLS

All bulls have passed a semen test and physical examination by Dr Chris Hallet, Coolah Veterinary Clinic including;

- Semen motility
- Palpation of internal genitalia
- Palpation of Scrotal contents
- Visual inspection of overall structure, including feet
- Visual inspection of locomotive ability.

MANAGEMENT

We take great pride in our established reputation for quiet cattle. These yearling bulls have had consistent contact with humans and dogs since weaning.

The bulls have been handled with dogs, horses, utilities, ATVs and on foot. We know each bull's temperament and are confident that under normal circumstances they are of sound temperament. However, these are still animals and we ask that you treat them kindly and with respect, especially on Sale day with the pressures of new people invading their space.

HEALTH

The bulls are ready for immediate use and we recommend using a yearling bull at a rate of 1 to 35 cows in their first year and 1 to 50 for every year after.

All bulls have been tested PI (pestivirus) negative and vaccinated with 7 in 1 (Lepto), Pestiguard and Vibriosis. They have had regular doses of Vitamin A, D, E, Vitamin B12 and drenched with Eprinex pour-on and Fasinox Oral on 17 May 2018. Bulls sold to Queensland will be blooded and vaccinated for three day sickness at our expense.

INSURANCE

Bulls are like any other piece of valuable farm equipment and it's wise to insure them, especially for the first six months of their working life. There are a number of options available through CGU and WFI at the Sale venue.

REGISTRATION

Ownership transfer of bulls will be registered by the vendors with Angus Australia, provided accurate transferee details are supplied with the Buyer's Instruction form.

GST

All animals are sold excluding GST.

RECESSIVE GENETIC CONDITIONS

All bulls over a 10% risk of being a CA, NH, AM or DD carriers have been tested with published results in the Lot information. We do not consider these to be significant commercial issues, but clients wishing any further information are welcome to contact us at any time.

SEMEN RIGHTS

All bulls sell with 100% semen marketing rights. Ben Nevis reserves the right to collect up to 200 straws of semen from any bull in the Sale for use within our herd. Any semen collection would be at the vendor's expense and the purchaser's convenience.

Lots marked in this catalogue with this symbol have had semen retained by Ben Nevis Angus Stud.

WARRANTY

The vendor warrants that:

Bulls are fertile and capable of natural service within six months of the date of Sale to the purchaser (Warranty Period).

The vendor will either:

1. Provide a satisfactory replacement; or
2. Provide a credit for use at the next Ben Nevis Angus Bull Sale equal to the purchase price (excluding any costs and expenses of the purchaser in taking delivery) minus salvage value.

Where:

1. The purchaser claims a bull is infertile, upon purchaser submitting a 2 x Veterinary Reports 10 weeks apart stating the bull is infertile (semen) OR 1 x Veterinary Report stating the bull is incapable of natural service, and a Statutory declaration by the purchaser to the effect that the substance of the report is true and correct. The Veterinarian must state that in their opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The Veterinary Report and the Statutory Declaration must be forwarded to the vendor within 14 days of the Warranty Period expiring.

BULL HANDLING

On arrival at their new home it is important a suitable mob of animals is yarded to greet the bull to minimise his stress. Suitable animals include pregnant cows, steers, but certainly not other bulls.

The bulls are in good joining condition at the point of Sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check bulls regularly to see they are working, especially in the early stages when most problems occur and early intervention can minimise the damage to the bull and conception rates. After joining, bulls should be drenched and placed on good pasture to get back into good condition.

HEALTH AND SAFETY OF VISITORS AT OUR SALE (RULES AND ADVICE)

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances; however there are inherent risks associated with cattle handling.

VISITORS ENTER THE CATTLE PENS AT THEIR OWN RISK. CHILDREN MUST NOT ENTER THE YARDS.

People entering the yards are at risk of injury. Be especially alert for bulls fighting. We do not expect the bulls to be aggressive with humans, but Sale Day places extraordinary pressure on them. Remember, even the quietest bull is in fact an unpredictable animal.

Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling so please use common sense and be alert at all times. Please call on any of the Landmark Agents for an escort through the bulls if required.

All persons who attend the sale do so at their own risk and the vendor assumes no liability, legal or otherwise, for any accidents which may occur.

YEARLING BULL INFORMATION

Information on the benefits of using yearling bulls can be found on page 6, or visit our website www.bennevisangus.com.au.

Heifer Bulls Just because he is a yearling bull does not necessarily make him a heifer bull. As with any bull, his effect on birthweight is determined by genetics. The other factor on birthweight is environment, especially nutrition.

We do have lines of bulls recommended for calving ease in the Sale. These have been selected due to a combination of their low actual birthweight within their contemporary, their pedigree, EBV's and shape. Many are out of our first calf heifers that calved unassisted. Genetics, being what it is, is impossible to guarantee calving ease but there are a number of factors we can employ to reduce the risk of dystocia. For more information on Calving Ease Management please go to our website www.bennevisangus.com.au for an article by Stu Halliday BVSc (USyd) MVSt (UQ).

Disclaimer: Every effort and all reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of printing. However, neither the vendor or selling agents take responsibility in regards to the accuracy, reliability or completeness of the information provided, and do not assume any responsibility for the use or interpretation of this information. You are encouraged to seek independent verification of any information contained in this catalogue.

AM I NOT PRETTY ENOUGH?

THE REAL BENEFITS OF YEARLING BULLS

STU AND ERICA HALLIDAY

Nature intended bulls to work at 12 – 14 months of age. This is when they become sexually mature but they're still light and agile so they can learn their new trade without a high risk of injuring themselves. This is not the case for bulls first used as two year olds who are often fed up to big weights for auction and therefore run a higher risk of injury while gaining sexual experience.

LOWER COSTS PER CALF

According to research by NSW Agriculture in the 1990's bulls used as yearlings not only have a lower incidence of breakdown or injury but a proven longer working life. This equates to:

- More calves over a longer period and,
- Lower costs per calf

	Average price	Average working life	Number of calves	Price per calf
Average yearling at auction	\$4,500	* 5 Years	230 (30 in year one, 50 thereafter)	\$20
Average 2 year old at auction	\$5,500	* 3 years	150	\$37

* Statistic taken from NSW Agriculture Better Bull Buying, edition 1996

EASIER TO MANAGE

At Ben Nevis we have been using yearling bulls for over 20 years. Our experience is backed by our clients and suggests that bulls used as yearlings are much easier to manage both in and out of the cows. Why? We believe it's because they are out working as their testosterone kicks in instead of being in a big mob with other bulls learning to fight and bully out of sexual frustration.

AM I NOT PRETTY ENOUGH?

Because yearling bulls are working and still growing (they can get a little too enthusiastic about their work) they can come out of the cows looking ragged. Rather than a bad sign it's a good sign that he had been working for you. They don't need special treatment just a good paddock and a dose. If not fed up at this stage (ie put on rye grass) then he will still eventually recover but probably won't make his mature weight potential until he is 3 or 4 years of age (if at all). The up side of this is that less stress is placed on his skeleton for life so he will always be more agile and less injury prone. In the words of reputable cattle producer and educator Sandy Yeates. "If our beef industry is to make progress, we must purge our minds of the belief that a bull has to be fat and well grown to be any good. The value of a bull should be measured by the performance of his offspring, not on what he looks like".

CAN I REACH A COW?

Short answer is yes, but the laws of physics apply and you should use well grown yearling bulls. Most of our bulls go over cows. Angus by nature have high libidos and are very resourceful.

HEIFER BULLS

Just because he is a yearling does not make him a 'heifer bull'. As with any bull his effect on calving ease is determined by genetics for birthweight and shape and other factors like nutrition and environment. However suitable heifer bulls used as yearlings will mean less injuries in heifers as well, due to their lower weight and they can be used over heifers for more years as they take longer to reach their mature weight.

HEALTH

Not everyone can produce yearling bulls. It is critical that the bulls are rigorously culled and well grown and that they are tested for reproductive soundness. To ensure this we employ a disciplined weaning, nutrition and bull education program to ensure they are:

- Extremely docile and manageable
- Well grown (averaging 500kgs + at 12 months); and
- Sexually mature with scrotal >30cm at 12 months and semen tested.

GUIDELINES FOR USE

Don't put yearling bulls out with older bulls or bulls that are significantly bigger in size in the first year. These bulls will significantly injure him while he is learning to serve.

In our commercial herd we put groups of yearling bulls out together and often put four brothers in with a mob of 100 cows. This has improved not only our conception rates in some of our steep, rugged country but also increased the uniformity of our calves and reduced the calving spread. Despite the large distances and terrain there is always someone on duty.

Other guidelines:

- Join to 35 females in the first year and normal levels thereafter
- Join for no longer than six weeks
- Make sure he is up to date for Parasites, 5 in 1
- Added boosts come from Selenium, Vitamin B12 and Vitamin A, D and E shots

Eventually your yearling bull will grow into a bull we can be proud of because of his calves, his contribution to your gross margin and his dashing good looks. With the money saved this can be put towards buying an even higher performance bull in the future and maximising genetic gain.

Traits observed: Boots and all, lets get this sale cracking with a bull who is a genuine stud prospect being big, correct and near top of the breed \$ Indexes and growth. His dam is in our donor program and is a maternal sister to our treasured stud sire Eritrea. Structurally hard to fault, mobile, powerful and docile with a smoking set of figures. Genetical to Lot 21. Scanned equal highest for IMF, equal second P8 Fat with an excellent EMA scan. He is top 1% growth across the breed. Awesome \$ Indexes – top 3% ABI, 5% GRN and 2% GRS. Semen retained.

Traits observed: We are still in Hooferville and the Sumos have moved in. Incredible muscle throughout with a big spring of rib and a massive hindquarter. He is so square and balanced. Another of Mag's favourites and he loves a scratch – super quiet.

Traits observed: Lopy had an infection from his ear tag when he was a calf. Take the time to appreciate the enormity of this bull, his depth of rib, how deeply he ties in his quarter and his fleshing ability. He will breed excellent B3 steers and front paddock replacement females. His dam is a Donor and we are waiting on her tail sample to be analysed for his registration to go though. Top 10% EMA scan, equal first P8 Fat. Genetical to Lots 6, 26, 35 and 68. We guarantee his registration.

Traits observed: Slightly smaller in frame than his brothers with more calving ease, but equally as tidy, slick coated and heavy muscled with a terrific strength of spine and Sires Outlook. Great performance on paper. Excellent IMF scan. Full ET brother to Lot 22, 23, 28, 30, 53 and 54, maternal brother to Lot 3 and 47. Top 1% EMA. Indexes – top 10% ABI, 4% DOM, 5% GRS.

Purchased by: \$

ASCOT LIONHEART (pictured above)

The \$70,000 QLD record breaking Ascot Lionheart is now in the top 1% of the breed for all of his \$ Indexes, and he has show stopping looks and impeccable structure to match. He offers our clients a breed leading combination of growth and marbling in a heavily muscled package, with a superb temperament.

HPCA PROCEED

One of the World's highest marbling bulls whose semen is no longer available. He is a rare animal indeed whose progeny defy the norm to have an abundance of sire appeal, thickness, softness and marbling.

BEN NEVIS JUDO

Judo progeny have been the top averaging sire group at our sale for the past three years because of their softness, skin, thickness, docility and carcass merit. Judo is by outcross Sire Remitall Rachis and is currently in the ASBP Benchmarking Project. His daughters are gems.

ASCOT HALLMARK

Also a highly successful graduate of the ASBP Benchmarking Project, Hallmark is universally popular for breeding superior females and to target the lucrative Jap B3 market. His calves are large framed, deep girthed and massive, with doing ability and softness.

BALDRIDGE COMPASS

We have some of the first sons to be sold in Australia of this highly popular genetics which offers calving ease and massive muscle. They are fast growing and early maturing.

\$163	\$137	\$192	\$147

Traits observed: Napoleon is top 1% for all his \$ Indexes and a cracker of a bull to match. Later maturing, he will grow into his massive hindquarter and be a very big bull. Napoleon is very expressively muscled with a powerful head and outlook. Loads of potential here and Hap's type. Genetical to Lot 40, 41, 58 and 60. Equal fourth highest IMF, top 10% EMA. Top 1% across the breed for growth, and unbeatable \$ Indexes of top 1% across the board. He is a very exciting bull who should attract stud or top end commercial interest. Semen retained.

Index Value			
ABI	DOM	HGN	HGS
\$134	\$122	\$140	\$130

Traits observed: A terrific character, he would be the bull to best suit a leather jacket for being tough – except he is such a clown. Super thick hind quarter and boldly racked through the rib, with a terrific head and sire appeal. Super, super quiet. His maternal brothers have all been sale favourites with one topping the 2014 sale going to Clunie Range and the other selling to Ian Crawford in 2015. Scanned with the second highest EMA. Top 7% growth across the breed, and top 3% EMA. \$ Indexes – top 7% ABI, and top 4% DOM and GRs.

Purchased by: \$

\$128	\$115	\$139	\$125

Traits observed: Full ET brother to Lot 11 and an exceptional bull in his own right. He is super athletic and powerfully constructed, with a wide top and stout body, backed by a phenomenal number set. His dam is the grandam of Metamorphic, the \$32,000 sale topper from last year's sale. His dam, maternal sister and sisters are all donors. Top 2% growth and top 8% EMA across the breed.

Traits observed: Nearly Midnight N232 is a crowd favourite here among all of us. He has the best skin of any bull in the sale, is a picture of balance and type with a terrific constitution. He will breed superb females with the same depth, thickness and volume he possesses and be kind in nature like him. Second highest P8 scan.

Traits observed: Nove is not only closely related to Lot 45, but their dams are the same maternal line (dam and grand dam). He represents a fantastic opportunity to inject marbling into your new generation of females by using him as a really safe option over heifers. Flat bone and excellent skin type add to his appeal and reflect the high levels of IMF he will transmit. Suitable for heifers.

Traits observed: Lion Heart has done a thumping job in these bulls, consistently adding extra thickness and big, bold ribs, like we see in this fella. We love that he has also brought quality and softness together in Noreaster, with high value indexes and genetics in general. Very quiet. Genetical to Lots 36 and 61.

Traits observed: Nimmet was born small and grew like the clappers and then he scanned the house down for his carcass traits. There are no holes in this bull – a very trusted pedigree, great set of numbers, suitable for heifers, soft, thick and structurally correct. Scanned equal fourth highest for IMF and top 10% EMA scan.

Traits observed: NABIAC is a Genetical to Lot 64 – with the same sire out of full sisters, both of who have been great donor cows for us. Like his super popular sire in the US, this bull will be a really great option for heifers and will add extra muscle shape with an enormous top like he does. Great skin and outlook. Top 3% EMA across the breed.

YEARLING BULLS.

THANK YOU TO OUR GUEST
AUCTIONEER PAUL DOOLEY FOR
HIS SOUND AND PRACTICAL
ADVICE, AND HIS ABILITY SEE
CATTLE AND READ PEOPLE.

Low Stress Stockhandling

The guru out the back bringing the cattle in is Chook Kealey. If you want to know more give Chook a call. Quiet cattle and happy people are really important to us, and his course was magic.

Chook Kealey grew up on a cattle and farming property in the South Burnett region of Queensland before spending the next eight years training performance horses for a variety of events. North West Queensland was home for the next seven years in a number of roles – from stock camps where helicopter mustering was a weekly occurrence, through to managing large mobs in intensive cell grazing operations. Walcha in the New England of NSW is now home, where he runs sheep and cattle.

A passion for animal psychology got him involved in Low Stress Stockhandling, however it is the amazing impact on people's lives that gives him the greatest enjoyment now.

Signature of Purchaser or Agent: _____ Date: _____

SPECIAL NOTICE TO BUYERS

In the interest of buyers and to prevent the occurrence of mistakes, all instructions concerning the delivery, trucking or shipping of cattle must be given IN WRITING and signed by the buyer or his/her representative.

THANK YOU

It's been a tough year with the drought and we just wanted to say a few thank you's to the people who we would be lost without.

First and for most Hamish Worthing who came to us this time last year to help us weigh a few calves and he has been with us ever since. Hamish has stepped up with a great work ethic and commitment, and we would have been lost without him.

To our kids – Jack and Mags, who have spent far more days in the cattle yards, spraying thistles, fixing bores, fencing and taking bull photos than they have doing what normal teenagers do – thank you, it's awesome to work with you both and we are very proud of you.

Bon we miss you, but thanks so much for coming up and helping on the sale days and for your creative, beautiful photo's.

To my mum Cherry and sister Kylie – we would simply be lost without your support, cooking, organisation and help.

Paul Dooley – thanks for the great advice and wisdom, you are a great sounding block

Ben Simpson – always on song, candid, inspirational and lots of fun, we love having you to guide us.

Halsa – professional bull tester, always wise and always funny.

Hobbsy- thanks for coming back and doing the magic with the bulls and for bringing Mitch. We miss having you around and wish you the best with your own business.

To the guys at Landmark – Miles, Simon, Mat, Trish and Bruce – the best agency team we could hope for and good mates too.

To Lionel and Dorro – great guys to rely on and we value your practical advice and company.

To our awesome team who every year drop what they are doing to donate their time and effort to make the sale a success – Jo, Roger, Frater, Chook, you are all amazing and we are very grateful.

To our financial team Garry- Rabobank thanks for your belief and vision, and to Brian Wall, Mikhaela and Kimberley from PKF thanks for keeping us on track.

Last, but not least, Megan Scrivener who keeps me sane, is the most gifted graphic designer I know, is unflappable (I do try), professional and a good friend – thank you.

BULL FERTILITY TESTING DEGREE'S OF CONFIDENCE

Many aspects of Veterinary Science are cut and dry. Pregnancy testing for example is either pregnant or not pregnant. Unfortunately Bull Fertility Testing is not one of those cut and dry situations.

We like to tell our clients that Bull Fertility Testing is all about degree's of confidence. The broader the range of aspects of bull fertility that we look at, the greater the degree of confidence we have to tell you that a bull is capable of doing the job.

If we look at the bull in a paddock and see he is not lame and has testicles then we could say we have 50% confidence he is going to do the job. If we bring the bull into the yards and feel and measure his testicles, eliminating palpable lumps or undersize testicles, we become 70% confident he will do the job. If we perform an examination of the internal sex organs, and they feel normal, we become 75% confident. If we use electro-ejaculation for visualisation of the penis and semen, and if the penis appears normal and has no evidence of trauma, warts, adhesions or infections and is able to be exteriorised and erect we are 80% confident. If we continue and visualise the semen under the microscope checking motility, crush-side morphology and ensuring it is free of infection we become 85% confident.

Crush side semen analysis is a great screening test for morphology analysis. At this stage one can make an educated assessment that the bull is fertile or for greater confidence we can submit a sample to the

semen morphology laboratory. Under higher magnification in the lab more intra sperm head problems may become apparent and a much more detailed assessment can be undertaken. A bull with a positive morphology report increases our degree of confidence to 90%.

Semen and visualisation of the penis is not necessarily an indication of serving ability to tell us if the bull is able to gain intromission to the cow. So a satisfactory serving ability test increases our confidence to 95%, and this test done repeatedly will give us an additional indication of the bull's libido. Often this test is done by the buyer at the start of joining (if just an observation).

A fertility test is potentially only good for the day that it is performed. Semen production works on a seventy day cycle if anything that upsets the bull it may take a full cycle for normal semen to be produced again. In this time the bull may go through a transient period of sub or infertility.

Events that upset the semen cycle and production can include disease, stress, transport, environment and nutritional changes. So if you purchase a bull and move to a completely different environment we strongly recommend you do your own fertility examination prior to use.
