# WELCOME TO BEN NEVIS

Earlier this year, at the age of 93 we lost our Patriarch, my father Bruce Steel – an industry legend who founded Ben Nevis Angus 70 years ago.

I have been fortunate to have had a wonderful relationship with my father and to have worked side by side with him my whole life. As a family we have shared his passion for the Angus breed.

On behalf of my family I would like to pay the highest tribute to a very special man who was loved and respected by many in this industry – young, old, starter or fellow legend. He will be deeply missed.

Dad loved working with young people and he was inspirational. He always said “any bastard can tell you what to do, I’ve spent my whole life working out what I don’t have to do”. With cattle he trimmed feet just behind the ears and bad temperament the same way. As for quality the Ben Nevis herd speaks for itself. It has been a life-long achievement.

Stu and I are honoured to take on Dad’s legacy and with Mum, my sisters and our children to work together to build on his vision. We welcome you to our 2017 sale.

**Erica and Stu Halliday**

## THANK YOU ...

Ben Simpson (so much more than a pretty face), thanks for being so inspiring and challenging – as well as your photographic genius. Megan Scrivener – the queen of graphic design, logic and efficiency. Chris Hallet BVSc MVSt – who thought bull testing could be so much fun. Stu Hobbs – extremely professional, we are very grateful to have you working with us. Lionel Lockyer, Hamish Worthing and Dorro for all your hard work. To our fantastic friends and volunteers – Ruth Frater, Sam Martin, Roger Van den Hoek, Jo Van Elten and Megan Tisdell. To our family – Mum (Cherry Cheer), Kylie (hard working comma nazi), Bon, Jack and Mags, you guys rock. To Paul Dooley, Pete and Anna Stevenson, Garry Littlejohns, Aaron Murdoch, Matt Larkings, Miles Archdale and Simon Newton, the gang at Boultons, Darren Edwards, Kimberley Lisle, Roger Evans, Geoff and Nathan Steinbeck, thank you for your professional guidance.

# THIS YEAR'S BULLS

## There has never been a better time to invest in quality

### THE BULLS

There are bulls in this sale we would like to keep as our Stud sires but we decided to offer them and increase our AI in both our stud and commercial herd to over 1,100 females. We have collected semen off a number of bulls in the sale and will progeny test them this way.

These bulls have been rigorously culled for feet, temperament and have been semen tested. We stand behind them 100%.

We have used many highly proven bulls that tested at the top of the Angus Progeny Test for carcase quality and growth, as well as female replacements. These include Ayrvale Bartel and Ascot Hallmark. The star again this year is Ben Nevis Judo. We expect over 250 calves on the ground at both Ben Nevis and Warrabah Station this Spring and have entered him in the Angus Progeny Test Program.

### THE HEIFERS – 400 TOP QUALITY BEN NEVIS BLOOD HEIFERS SELL

At 12.00pm just before the bull sale we will live auction 400 heifers at our Ben Nevis Blood Heifer Sale. This sale will be interfaced with Auctions Plus with live bidding (NOT Helmsman). The heifers will be top quality front paddock heifers PTIC empty and will average over 300kgs ready to join. Vendors will be: Ben Nevis Angus 100 heifers (the top pick of the commercial herd); Warrabah Pastoral 150 heifers; Kanimbla Grazing 100 heifers; and Cedars Pastoral 50 heifers. Ben Nevis heifers will be on site, the others on Auctions Plus. Details including photos/video is on our website and Auctions Plus.

### OUR INDUSTRY FOCUS

We have focussed our breeding efforts on satisfying the insatiable and exponentially growing demand for the highest quality beef in China and Japan, while maintaining a profitable and efficient cow herd that are a pleasure to work.

This has meant selecting for growth and IMF, while culling for temperament and feet. We very simply treat all animals the same and multiply those that thrive in our grass conditions. We know that marbling is a key profit driver but not at the expense of all the other traits that have made our breed so successful. Our progress has been deliberate and measured.

Similarly we know as an industry we need to improve turnover and so have focussed on animals that grow, finish and marble faster.

### WHY RAW DATA?

The academic purists get upset when we include raw data. Our logic is this- When everything is treated the same it is important to us which ones do the best especially for IMF and growth. This is, after all, the basis of BREEDPLAN. If an animal says it is in the top 5% of the breed for IMF EBV we like to check that it performed in a commensurate way within its contemporary.

### WHY SCANNING?

Scanning is the most commercially viable and time effective way to measure carcase traits because you don't have to kill the animal to get it, and it's easily measured when they are yearlings and in good enough condition. In heifers there is a correlation of .7 between scanned IMF and carcase marbling score. This is meaningful and very useful.

In most bulls that correlation drops to .4. The issue here is that many bulls when they are scanned don't have enough fat on them to scan so they have not yet expressed marbling and the differences are not evident. This is not the case with our yearling bulls as most average over 6 mls of fat.

We scan at 10 – 12 months and are aware there are some bulls that will marble later on but it has not yet been triggered. However we are targeting the ones who express marbling earlier as well as the actual levels of marbling they achieve. These will be the animals who, in the future, will reach their targets more quickly and reduce costs while increasing turnover. We consider this very valuable information as we aggressively target the premium high marbling markets.

### PREPARATION

The bulls have been early weaned using the innovative AIM protocol, which is claimed to improve rumen development for life. We have been using this system for ten years now and are delighted with the results. Combined with genetics our yearling bulls average over 500kg and up to 650kgs – so are fit, strong and ready to work.

**We are happy to blood bulls and give three day vaccine for bulls sold to Queensland and will work in with you for the best delivery time so they adapt.**

# SALE INFORMATION

## SALE DATE AND PRIOR INSPECTION TIME

The annual Ben Nevis Angus Sale will take place on Wednesday 13 September 2017. Undercover shelter is provided.

### 10.00am – Inspection

Bulls may be inspected from 10.00am on the morning of the Sale, or at any other time by arrangement with the agents or vendors.

### 12.00pm – Ben Nevis Blood Heifer Sale

The heifers will be top-quality, front-paddock heifers and will be preg tested empty. Vendors will be Ben Nevis Angus – 100 heifers that can be viewed on-site (the top pick of the commercial herd), Warrabah Station – 150 heifers, Kanimbla Grazing – 100 heifers and Cedars Pastoral – 50 heifers.

### 1.00pm – Ben Nevis Angus Yearling Bull Sale

75 yearling Angus bulls.

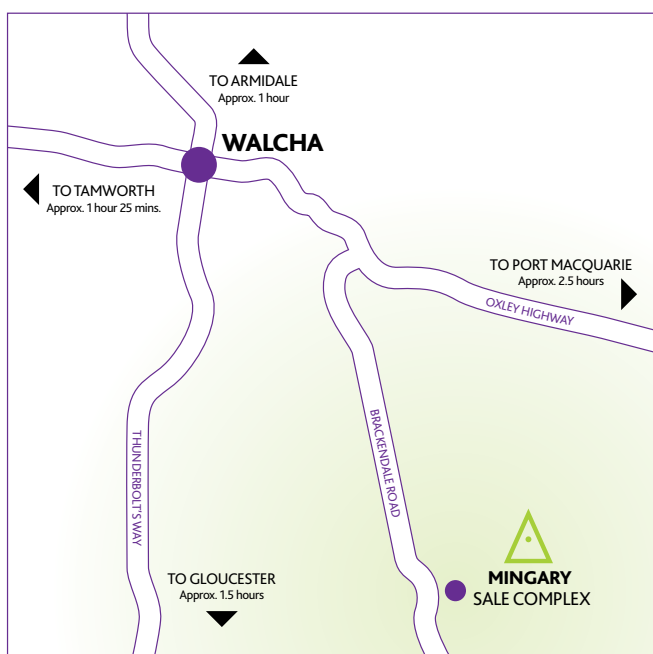

## SELLING SYSTEM

Sale of the bulls will be conducted under normal auction conditions. Sale of the heifers will be conducted by AuctionsPlus with live bidding (NOT Helmsman). Please check with the Selling Agents to obtain a buyer's number if you are considering making a purchase. Successful purchasers are requested to give written advice to the Selling Agents regarding transport arrangements at the conclusion of the Sale.

## HOW TO GET TO THE MINGARY SALE COMPLEX

From Walcha take the Oxley Highway and head east towards Port Macquarie. Approximately 4kms out of Walcha turn right onto the Brackendale Road.

The Mingary woolshed and yards are approximately 6kms along the Brackendale Road on the left hand side, and will be well sign posted on Sale day!

## FREE DELIVERY

We will provide free delivery within 300km radius of Walcha. Please inform us if you need this on your Buyer's Instruction slip. If you purchase five or more bulls we will delivery free of charge to Queensland, Northern Territory, New South Wales, Victoria, South Australia and the Australian Capital Territory. Please contact us directly to arrange.

## REBATE

2% rebate to outside Agents registering BULL BUYERS, in writing, '24 hours' PRIOR to the Sale and settling on their behalf within seven days of the date of Invoice.

## PHONE BIDDING

The Sale will also be on AuctionsPlus or contact the Selling Agents.

## CATERING

Catering will be supplied by Walcha Junior Rugby – including steak and sausage sandwiches, tea, coffee and cold drinks.

## PHYSICAL EXAMINATION OF BULLS

All bulls have passed a semen test and physical examination by Dr Chris Hallet, Coolah Veterinary Clinic including;

- Semen motility
- Palpation of internal genitalia
- Palpation of Scrotal contents
- Visual inspection of overall structure, including feet
- Visual inspection of locomotive ability.

## MANAGEMENT

We take great pride in our established reputation for quiet cattle. These yearling bulls have had consistent contact with humans and dogs since weaning.

The bulls have been handled with dogs, horses, utilities, ATVs and on foot. We know each bull's temperament and are confident that under normal circumstances they are of sound temperament. However, these are still animals and we ask that you treat them kindly and with respect, especially on Sale day with the pressures of new people invading their space.

## HEALTH

The bulls are ready for immediate use and we recommend using a yearling bull at a rate of 1 to 35 cows in their first year and 1 to 50 for every year after.

All bulls have been tested PI (pestivirus) negative and vaccinated with 7 in 1 (Lepto), Pestiguard and Vibriosis. They have had regular doses of Vitamin A, D, E, Vitamin B12 and drenched with Eprinex pour-on and Fasinex Oral on 17 May 2017. Bulls sold to Queensland will be blooded and vaccinated for three day sickness at our expense.

## INSURANCE

Bulls are like any other piece of valuable farm equipment and it's wise to insure them, especially for the first six months of their working life. There are a number of options available through CGU and WFI at the Sale venue.

## REGISTRATION

Ownership transfer of bulls will be registered by the vendors with Angus Australia, provided accurate transferee details are supplied with the Buyer's Instruction form.

## GST

All animals are sold excluding GST.

## RECESSIVE GENETIC CONDITIONS

All bulls over a 10% risk of being a CA, NH, AM or DD carriers have been tested with published results in the Lot information. We do not consider these to be significant commercial issues, but clients wishing any further information are welcome to contact us at any time.

## SEMEN RIGHTS

All bulls sell with 100% semen marketing rights. Ben Nevis reserves the right to collect up to 200 straws of semen from any bull in the Sale for use within our herd. Any semen collection would be at the vendor's expense and the purchaser's convenience.

Lots marked in this catalogue with this symbol have had semen retained by Ben Nevis Angus Stud.

## WARRANTY

The vendor warrants that:

Bulls are fertile and capable of natural service within six months of the date of Sale to the purchaser (Warranty Period).

### The vendor will either:

1. Provide a satisfactory replacement; or
2. Provide a credit for use at the next Ben Nevis Angus Bull Sale equal to the purchase price (excluding any costs and expenses of the purchaser in taking delivery) minus salvage value.

### Where:

1. The purchaser claims a bull is infertile, upon purchaser submitting a Veterinary Report stating the bull is infertile or incapable of natural service, and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The Veterinarian must state that in their opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The Veterinary Report and the Statutory Declaration must be forwarded to the vendor within 14 days of the Warranty Period expiring.

## BULL HANDLING

On arrival at their new home it is important a suitable mob of animals is yarded to greet the bull to minimise his stress. Suitable animals include pregnant cows, steers, but certainly not other bulls.

The bulls are in good joining condition at the point of Sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check bulls regularly to see they are working, especially in the early stages when most problems occur and early intervention can minimise the damage to the bull and conception rates.

After joining, bulls should be drenched and placed on good pasture to get back into good condition.

## HEALTH AND SAFETY OF VISITORS AT OUR SALE (RULES AND ADVICE)

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances; however there are inherent risks associated with cattle handling.

### VISITORS ENTER THE CATTLE PENS AT THEIR OWN RISK. CHILDREN MUST NOT ENTER THE YARDS.

People entering the yards are at risk of injury. Be especially alert for bulls fighting. We do not expect the bulls to be aggressive with humans, but Sale Day places extraordinary pressure on them. Remember, even the quietest bull is in fact an unpredictable animal.

Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling so please use common sense and be alert at all times. Please call on any of the Landmark Agents for an escort through the bulls if required.

All persons who attend the sale do so at their own risk and the vendor assumes no liability, legal or otherwise, for any accidents which may occur. All reasonable care has been taken to provide correct information in this catalogue; however the vendor assumes no liability legal or otherwise for typographical or other ERRORS that occur in this catalogue and do not assume any responsibility for the use or interpretation of the information provided.

## YEARLING BULL INFORMATION

Information on the benefits of using yearling bulls can be found on page 6, or visit our website [www.bennevisangus.com.au](http://www.bennevisangus.com.au).

**Heifer Bulls** Just because he is a yearling bull does not necessarily make him a heifer bull. As with any bull, his effect on birthweight is determined by genetics. The other factor on birthweight is environment, especially nutrition.

We do have lines of bulls recommended for calving ease in the Sale. These have been selected due to a combination of their low actual birthweight within their contemporary, their pedigree, EBV's and shape. Many are out of our first calf heifers that calved unassisted. Genetics, being what it is, is impossible to guarantee calving ease but there are a number of factors we can employ to reduce the risk of dystocia. For more information on Calving Ease Management please go to our website [www.bennevisangus.com.au](http://www.bennevisangus.com.au) for an article by Stu Halliday BVSc (USyd) MVSt (UQ).

**Disclaimer:** Every effort and all reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of printing. However, neither the vendor or selling agents take responsibility in regards to the accuracy, reliability or completeness of the information provided, and do not assume any responsibility for the use or interpretation of this information. You are encouraged to seek independent verification of any information contained in this catalogue.

# AM I NOT PRETTY ENOUGH?

## The Real Benefits of Yearling Bulls

Stu and Erica Halliday

Nature intended bulls to work at 12 – 14 months of age. This is when they become sexually mature but they're still light and agile so they can learn their new trade without a high risk of injuring themselves. This is not the case for bulls first used as two year olds who are often fed up to big weights for auction and therefore run a higher risk of injury while gaining sexual experience.

### LOWER COSTS PER CALF

According to research by NSW Agriculture in the 1990's bulls used as yearlings not only have a lower incidence of breakdown or injury but a proven longer working life. This equates to:

- More calves over a longer period and,
- Lower costs per calf

	Average price	Average working life	Number of calves	Price per calf
Average yearling at auction	\$4,500	* 5 Years	230 (30 in year one, 50 thereafter)	\$20
Average 2 year old at auction	\$5,500	* 3 years	150	\$37

\* Statistic taken from NSW Agriculture Better Bull Buying, edition 1996

### EASIER TO MANAGE

At Ben Nevis we have been using yearling bulls for over 20 years. Our experience is backed by our clients and suggests that bulls used as yearlings are much easier to manage both in and out of the cows. Why? We believe it's because they are out working as their testosterone kicks in instead of being in a big mob with other bulls learning to fight and bully out of sexual frustration.

### AM I NOT PRETTY ENOUGH?

Because yearling bulls are working and still growing (they can get a little too enthusiastic about their work) they can come out of the cows looking ragged. Rather than a bad sign it's a good sign that he had been working for you. They don't need special treatment just a good paddock and a dose. If not fed up at this stage (ie put on rye grass) then he will still eventually recover but probably won't make his mature weight potential until he is 3 or 4 years of age (if at all). The up side of this is that less stress is placed on his skeleton for life so he will always be more agile and less injury prone. In the words of reputable cattle producer and educator Sandy Yeates. "If our beef industry is to make progress, we must purge our minds of the belief that a bull has to be fat and well grown to be any good. The value of a bull should be measured by the performance of his offspring, not on what he looks like".

### CAN I REACH A COW?

Short answer is yes, but the laws of physics apply and you should use well grown yearling bulls. Most of our bulls go over cows. Angus by nature have high libidos and are very resourceful.

### HEIFER BULLS

Just because he is a yearling does not make him a 'heifer bull'. As with any bull his effect on calving ease is determined by genetics for birthweight and shape and other factors like nutrition and environment. However suitable heifer bulls used as yearlings will mean less injuries in heifers as well, due to their lower weight and they can be used over heifers for more years as they take longer to reach their mature weight.

### HEALTH

Not everyone can produce yearling bulls. It is critical that the bulls are rigorously culled and well grown and that they are tested for reproductive soundness. To ensure this we employ a disciplined weaning, nutrition and bull education program to ensure they are:

- Extremely docile and manageable
- Well grown (averaging 500kgs + at 12 months); and
- Sexually mature with scrotal >30cm at 12 months and semen tested.

### GUIDELINES FOR USE

Don't put yearling bulls out with older bulls or bulls that are significantly bigger in size in the first year. These bulls will significantly injure him while he is learning to serve.

In our commercial herd we put groups of yearling bulls out together and often put four brothers in with a mob of 100 cows. This has improved not only our conception rates in some of our steep, rugged country but also increased the uniformity of our calves and reduced the calving spread. Despite the large distances and terrain there is always someone on duty.

Other guidelines:

- Join to 35 females in the first year and normal levels thereafter
- Join for no longer than six weeks
- Make sure he is up to date for Parasites, 5 in 1
- Added boosts come from Selenium, Vitamin B12 and Vitamin A, D and E shots

Eventually your yearling bull will grow into a bull we can be proud of because of his calves, his contribution to your gross margin and his dashing good looks. With the money saved this can be put towards buying an even higher performance bull in the future and maximising genetic gain.

**Traits observed:** Let's crack this sale open with a bull that should have been called Hollywood. He nominated himself for the front of our advertising campaign and was definitely the man for the job showing everything we are trying to achieve in a bigger version of the classic Angus bull by demonstrating constitution and phenotypic excellence with an extra injection of IMF under the hide. Hollywood is not just all glamour, he is one of the heaviest, most complete bulls in the sale posting the second highest EMA scan. This bull has 3/4 brothers (Genetics) in Lots 11 and 22. Video online.

**Traits observed:** The most powerful bull in the sale. His square jaw and muzzle stamp the mould for the rest of his body being square and thick across the top, following through to his powerful hindquarter – he stands down on a mass of bone. If BREEDPLAN had a sense of adventure it would have credited him with a higher EBV for IMF given he ranked #6 in the contemporary. Top 5% 600 day and ranked equal second EMA. Semen retained. Video online.

**Traits observed:** E121's previous son opened last year's sale and she has done it again earning herself a berth on the ET wagon. Offering an injection of quality and IMF being equal fourth rank in his contemporary, but with extra powerful growth and that deep, soggy muscle of the easy doing cattle. This is a quality animal. Mate will have parent verification results by the sale as we feel there has been an error and he should be by Judo in the Angus system.

**Traits observed:** Motown is the first of our Jabbas on offer and he is a real herd changer. As Jabba is the backup bull, these are the younger bulls in the sale, but Motown has thumped his way right up to top end of the catalogue. Like all the Jabba's to come his temperament is a feature we value enormously. Motown is one of the biggest framed bulls in the sale, offering massive extra kilo's for his calves over your scales. He is also very correct with a good shoulder and a deep rib and flank. You're going to treasure his daughters.

\$115	\$110	\$119	\$112

**Traits observed:** We really believe the future of the industry will need animals that have a faster turnover and meet their specs earlier. Even now you can finish nearly three Angus to premium market specs before you turn off one 400 day fed Wagyu. Quality is paramount, but so is efficiency and bulls like Motivator are the answer. Flat bone, fine skin and doing ability in spades. Dramatically shortened the turn off time in your cross bred program or invest in premium Angus. On top of this inject IMF - he scanned equal third in the contemporary.

\$119	\$102	\$126	\$115

**Traits observed:** The industry is shifting quickly now to pay for quality. To satisfy the exponentially growing demand for quality beef in China and Japan we need to increase marbling. At the same time to compete with chicken and pork we need higher turnover in the form of fast early growth and finishing ability. Monarch is the answer. He has all this natural thickness stuffed into a silk sock showing clean, wide spades up the seat of his pants. He's the highest bull ever scanned here for IMF at 6.8% at 10m. EBV's – top 15% IMF and growth. You can scratch him in the paddock. Should be suitable for heifers. Semen retained.

**Traits observed:** Ministry offers a fair bit extra in the grunt department as well as above average IMF, which places him highly on all his indexes and the top 15% of the breed for Domestic Beef Production. This is pretty obvious also in his ability to finish and slam down the scales early. Michael Campbell purchased his maternal brother in last years sale for \$12,000 and we will use his semen this year. Love his docility, big rib and sires outlook. If you missed out on Lot 6 this is his Genetical (3/4 brother) along with Lot 68. Suitable for heifers. Semen retained.

**Traits observed:** Stumpy has history, big history with a string of brothers consistently making over \$10,000, one brother being one of our most successful Stud Sires in Gamemaker and his sisters going into the donor program with his dam and her full sister. No pressure there Stumpy but we think you are up for it. Like Gamemaker Stumpy will have the constitution of an ox, and will grow into a massive bull, (Gamemaker no longer fits up any crush). The weight in these guys comes mostly in width and depth-notice his depth of flank and big rib capacity.

**Traits observed:** Cracker of a heifer's first calf with added frame, extension and carcass quality all within a sire, showy outlook. Safe on heifers but with an extra shot of kilos and injection of IMF. Notice how deep and soggy his muscle is coming right to the hock and tying deep in his quarter. Docile. Top 25% IMF EBV and Top 5 % for all his Indexes. Semen retained.

Purchased by: \$

# SIRES

## BEN NEVIS JUDO

Astute cattleman Pete Stevenson purchased Judo in 2014 and we have since Al'ed to him and leased the bull back. Last year his first progeny blew us away being the highest averaging sire group at our yearling sale at \$10,500. In a head to head comparison with the hotly demanded Ayrvale Bartel his progeny were born as small but grew better. They both scanned similarly with a wealth of IMF under a soft, silky skin. The Judo's have the added benefit of an unbelievably docile nature. Just five on offer this year but all crackers. We will have over 100 Judo calves this Spring, and Pete will have 150 at Warrabah. He has been entered in the Angus Australia Progeny Test Program.

## ASCOT HALLMARK

We are always searching for bulls that will give our clients the edge in supplying the premium branded beef and B3 trades. To do this we have targeted growth and IMF and you will go a long way to finding a better bull to do this than Hallmark.

He is big framed and long bodied with a massive girth. Freakily he is also easy doing and fine skinned with the gentlest nature. His progeny are rare and will be hotly sought after. He is the sire of the \$70,000 Ascot Lionheart that we purchased last year with Trio and is a breed leader for his combination of growth, IMF, P8 fat and all his \$ indexes.

## BRAVEHEART OF STERN

Braveheart progeny stand out. He is not rated by BREEDPLAN but we rate him very highly and just had to keep using him. They are proud, thick and incredibly athletic young sires and represent the constitution that made the breed famous. His females are superb.

## JSR JACKS JOKER

By Impact out of arguably the best DSK Panda cow in the country (by Rachis), Joker has bred the house down here. Superbly docile with thumping big hindquarters and exceptional scan results for IMF. Sire of our top priced bull – Ben Nevis Loaded Gun, purchased by Cascade Angus for \$26,000 in 2016.

## AYRVALE BARTEL

This is our fourth year of using Bartel. This year we joined him to bigger stronger Empire and Evidence cows as well as heifers and we are delighted with the results. More bone, more thump and more width still with a massive injection of IMF on the inside.

The added bonus of the Bartel line are his daughters. They are easy doing, big ribbed girls who have scorched to the top of our breeding programs. Bartel blitzed the 2016 Angus Australia Progeny Test Program for carcase, with his combination of growth and calving ease.

## DALWHINNIE JOHNO AGQJ5

Selected for his easy doing qualities to use over our bigger, more powerful cows. Beautiful pedigree combining Sitz 458N and the Millah Murrah Flower line. Impeccable temperament.

## 400 QUALITY BEN NEVIS BLOOD HEIFERS FOR SALE

At 12.00pm – just before the 2017 Ben Nevis Bull Sale, we will live auction 400 heifers at our Ben Nevis Blood Heifer Sale. This sale will be interfaced with AuctionsPlus with live bidding (not Helmsman).

The heifers will be top-quality, front-paddock heifers and will be preg tested empty. Vendors will be Ben Nevis Angus – 100 heifers (the top pick of the commercial herd), Warrabah Station – 150 heifers, Kanimbla Grazing – 100 heifers and Cedars Pastoral – 50 heifers.

Ben Nevis heifers will be on-site at Walcha NSW, the others on AuctionsPlus. For more details visit our website [www.bennevisangus.com.au](http://www.bennevisangus.com.au) and AuctionsPlus [www.auctionsplus.com.au](http://www.auctionsplus.com.au)

## NEXT YEAR'S SIRE – ASCOT LIONHEART

Last Spring we purchased the Queensland record breaking Ascot Lionheart for \$70,000 with Trio Angus. We are delighted with our first calves and will have Lionheart sons available at our 2018 sale.

Lionheart is in the top 1% of the breed for all indexes, has show stopping looks and impeccable structure to match. He is a son of Ascot Hallmark out of a highly valued Millah Murrah blood Female by Evident. He will offer our clients a breed leading growth and marbling combination in a mid-maturing, heavy muscled package.

\$91	\$94	\$88	\$95

**Traits observed:** One of the bulls with more capacity and volume which is reflected in his head, sires outlook and big, broad muzzle like a shovel. A free moving bull as well with a supple spine and exceptional softness. The Top 1% 600 Day EBV is pretty evident in this big guy. He will breed Jap B3 steers with ease and leave you with beautiful docile and big capacity daughters.

Index Value			
ABI	DOM	HGN	HGS
\$110	\$111	\$114	\$109

**Traits observed:** Marathon posted a huge IMF scan being equal third in the contemporary. Big soggy bull who has the softness and constitution we target. Extra kilo's with doability gives you extra marketing options into the premium markets with a faster weight gain to get there. J82 is now a donor and her calf last year sold to Pete and Anna Stevenson at Warrabah Station for \$14,000, which we leased back this Autumn. Top 15% growth. If you miss him or want to get an excellent mob of bulls for a group join his Genetics (3/4 brothers) following in Lots 47, 56 and 70. Semen retained.

Index Value			
ABI	DOM	HGN	HGS
\$98	\$97	\$100	\$97

**Traits observed:** A younger bull to add frame and weight who stands down on extra bone. Temperament is such a hard trait to quantify but we rank it as one of the most important things in our breeding program. M174 has always come up for a scratch or to lick your hand. He is an absolute gentleman who will be a real asset to your herd for that alone. Add to that real weight and marbling.

**Traits observed:** Megabite's Dam has been earmarked as a donor even though this is her first calf. She comes from a long line of high performing females at Ben Nevis and is herself a top ranker for growth as well as being selected for a show heifer. Her son shows the extra growth for age he gets from her Grand sire, and the doability and skin also. This bull is later maturing but will breed the house down, and his daughters will be treasured. Top 15% growth EBV's and ABI Index, top 10% Heavy Grass Index. Semen retained.

**Traits observed:** Another beautifully docile, big framed Jabba for your selection. Mustafa is one of the younger bulls in the sale with a more expressive muscle pattern that lifts upwards to a butterfly top and obvious big eye muscle expression over his loin. Great tail set and laid in shoulder are features of his impeccable structure.

**Traits observed:** The ET calf of one of our absolute gems in his Geranium Donor Dam. The Geranium line is at the heart of what we are trying to achieve and this bulls Grandmother is in every Donor we have. Majesty is a chunky thumper. He would breed the house down over bigger framed or Euro/Indicus cows and we know he will leave you the best daughters for years to come. Thick, heavy boned and easy doing. Just check him out from behind, he is the man!

**Traits observed:** If you missed out on Lot 40 Maestro is his Genetical with a larger, longer frame. All these joinings have a predictable quiet nature but Maestro would get in the ute with you if he wasn't so damn huge. He is going to be a massive bull, with lashings of volume and capacity. For a big bull he has an excellent shoulder construction and good extension. His EBV's are backed up by excellent performance within his contemporary. Suitable for heifers with curve bending growth.

Purchased by: \$

\$82	\$87	\$70	\$88

**Traits observed:** We love the sheer width of top on this bull and he's got plenty of grunt to go with it in a super soft, deep package. Typical Braveheart with the constitution of an Ox. His Top 5% P8 fat EBV basically gives us extra confidence. His doing ability is a real must in harsher climates to help daughters re-breed and to be able to finish cattle earlier. BREEDPLAN should have credited him with more growth as he is right at the top for ADG as well.

**Traits observed:** Out of one of our favourite cows E124 who is the biggest hoofa on Ben Nevis. We have tried to flush her but unfortunately some cows don't flush so this is a great opportunity. He is one of the youngest bulls in the sale displaying the same silky softness of his mum with extra IMF under the hide. His daughters will be prized assets. Despite his low birthweight and EBV's his Dam is such a big girl that we wouldn't recommend him for heifers as he may throw back to her. His maternal brother was purchased by Banquet Stud in 2014. Pictured on page 30.

**Traits observed:** If you need to boost muscle power then Mctavish would be happy to oblige. This chunky monster would be great over Euro or Bos Indicus cross cows to add doing ability and to soften them up so that they will finish earlier and yet yield extra well. For a heavier muscled bull he still has a great shoulder and front.

**Traits observed:** Excellent balance and length compliment the amazing low birth weight/IMF combination that this young Sire offers genetically. Equal second in the contemporary for his IMF scan gives you extra confidence that this genetics will stream IMF through your younger generation of females giving you live calves with huge premium market potential. Suitable for heifers.

**Traits observed:** Another ripping heifers first calf that is growing fast, and is an impressive young bull. Like all Frontrows he is very neat and correct, was born very small and grew fast. His combination of low birth weight, excellent front end and smooth coupling of shoulder to hip make him an ideal candidate for calving ease. Silky, meaty pants and a high IMF will give you the box seat when marketing his progeny. Suitable for heifers.

**Traits observed:** Another ideal young bull to use on heifers. We have been working for years to design calves that will be easily born, but that will also grow. We have worked with clients and chased sires over the world because there is nothing worse than have calving problems and we'd much rather see you relaxing at the end of each day having a red wine. Monty was born small, even within the heifer calving contemporary and now shows classic easy doing growth.

**Traits observed:** An absolute character and very quiet with an obsession with side mirrors and windows (to see himself in). Antenna's and spotlights are also great fun so don't take your prized car into the paddock and leave it with him. Along with a sense of humour he is a very soft skinned, easy doing, flat boned bull with exceptional quality carcass attributes. He scanned equal fourth in his contemporary for IMF. While enormous he runs on the smell of an oily rag and is always in good clobber.

We didn't say anything at the beginning because you would have all just sat there and watched Chook instead of bidding, but the guru out the back bringing the cattle in is LSS guru Chook Kealey. If you want to know more give Chook a call. Quiet cattle and happy people are really important to us, and this course was magic.

Chook Kealey grew up on a cattle and farming property in the South Burnett region of Queensland before spending the next eight years training performance horses for a variety of events. North West Queensland was home for the next seven years in a number of roles – from stock camps where helicopter mustering

was a weekly occurrence, through to managing large mobs in intensive cell grazing operations. Walcha in the New England of NSW is now home, where he runs a sheep and cattle.

A passion for animal psychology got him involved in Low Stress Stockhandling, however it is the amazing impact on people's lives that gives him the greatest enjoyment now.

# CALVING EASE MANAGEMENT

Stu Halliday BVSc MVSt

If you have problems at calving you risk losing the calf and the heifer, but the hidden costs are sometimes even greater. These include the sub-clinical effects of poor colostrum transfer and milk production plus more difficulty getting the female back in calf due to infections, prolapses and stress.

It's easy to entirely blame the bull if you have a poor calving in your first calf heifers. However, in reality genetics accounts for only forty percent of what you see in a calf, and half of that comes from the female. A massive sixty percent of what you see in a calf is environmental. The good news is that we can control many of the environmental effects and we can also steer genetics in the right path to give the heifer the best chance of calving easily, producing a thriving calf and quickly re-breeding.

## CONTROLLING THE ENVIRONMENT

We break the environmental effect into two components.

The first being the environment around the calf in utero including how well grown, strong and healthy their mother is, as well as how nutrition has impacted on the calf for the three trimesters of pregnancy. The second component is the external environment ie the nutrition/pastures and conditions in the fortnight leading up to calving and their effect on the metabolics of the cow and her subsequent ability to push the calf out.

In short, a two year old heifer will have the best chance of calving if she has reached at least 75% of her mature weight (85% is better), by the time she calves. Given that nutrition diverts strongly in the last trimester of pregnancy to the unborn calf, it is critical that the heifer does most of her growing in the first trimester. This fits logically if calving patterns are matched to seasonal conditions ie for us Spring/ Summer is the first trimester, and winter is 3rd trimester. What it doesn't mean is to starve a heifer in the last trimester as this will only serve in making the heifer weaker.

In the period leading up to calving the key message is that lush, heavily fertilised, green grass (or crop) is the enemy, particularly short grass. The reason for this is that it is rich in nitrates and high in potassium and these affect the ability of muscles to function.

Of course two of the biggest muscles in the body at calving are the uterus (needed for strong contractions to push the calf out) and the rumen (needed to give the heifer the energy to get through the process). So excess nitrates and potassium lead to poor muscle function leading to what we call 'lazy heifer calvers', or technically speaking, hypocalcaemia.

What you will see clinically is dead calves or paralysed heifers because the calf has been in the birth canal too long, or calves that you pull easily and the heifer has just run out of puff. Then you get subclinical effects including prolapses, poor presentations, infections and poor colostrum transfer.

## HOW TO FIX LAZY HEIFER CALVERS

Ideally heifers should calve in dry natural pastures that have plenty of bulk and energy. When we can, we leave a paddock in Autumn/Winter to bulk up and frost. Sometimes this is difficult but you can work with what is there. If you have no choice but to put them on green, short or highly fertilised pastures then you need to try and balance the nitrate/potassium (N/K) challenge in the fortnight leading up to the point of calving. At the very least this may mean supplementing the heifers with rough hay (straw, wheaten, oaten, sorghum)- not lucerne or silage as these too are rich in N and K.

At best you should supplement the heifers with the rough hay as well as a Magnesium based lick, pellet or block. This will negate the N/K effect on muscle function and allow her to mobilise the calcium from her bones for strong contractions, extra energy and good colostrum transfer giving the heifer her best chance to get the calf out, whatever the size.

Magnesium based licks are commercially available in a pre-calve lick or pellet and most cost effective if you have the ability to early preg-test your heifer mobs and split them into calving groups three weeks out. It's an easy positive cost benefit if you can deliver more live calves and have more live heifers (it doesn't take many extra of those to make a big difference). The extra bonus is healthier and bigger weaners and increased first calf heifer re-conception rates.

# BRUCE LAIDLAW STEEL

3 DECEMBER 1923 – 6 JUNE 2017

## Angus breed legend Bruce Steel passed away in June this year at the age of 93 in his home town of Walcha NSW.

While Ben Nevis Angus marked a significant milestone this year celebrating 70 years, their Patriarch and Founder, Bruce Steel passed away at the age of 93 in his home town of Walcha NSW.

Bruce was an Angus breed legend. Many people, young and old were inspired by Bruce Steel's passion and vision for the Angus breed which was well before they were popular. During WW2 Bruce's Commanding Officer was the "hard but fair" HG Munro from Booroomooka who inspired him to start with Angus. Bruce was an underage soldier at the time but when he eventually came home to Walcha he decided to start an Angus stud. He leased and then purchased Ben Nevis off his bachelor Great Uncles and cleared and fenced it all by hand, and sold the rabbit skins for money. Later he inherited Mingary to form Ben Nevis Grazing Company.

In 1947 he purchased three stud cows from Abington and Ben Nevis Angus was formed.

Even as Bruce's Dementia progressed in his final year he could still tell us about those now famous cow families – the Geraniums, Dormists, Dorgammers and Kiwi's.

Bruce was an early adopter of pasture improvement and superphosphate and Ben Nevis Grazing Company went from running 1,000 sheep and 36 cows to 12,000 merinos and today 1,100 cows. Ben Nevis, though at 1,350m above sea level and wild, was Bruce's pride and joy along with his cattle and border collie-kelpie cross dogs.

In Bruce's diary he notes the 1964 drought was the hardest. They got 10 inches in January and 14 for the year. It was clover dominant and all the clover dried up and blew away leaving dust. Bruce was at the pub when he found out Yalgoo (another property close by) were going on the road with their stock. He and Tom Brady, who worked with him, went home and mustered their sheep and had them on the road at 2am, just passing the Yalgoo gates in front of their mob. He stayed on the road for two years making many friends... (but maybe not the guys from Yalgoo).

In the Angus breed Bruce and Cherry Steel went on to earn the love and respect of their fellow Angus members and cattlemen and women in general. Bruce was Chairman of the New England Angus Breeders and

was instrumental in the start and development of the successful NEAB Show and Sale and the famous Tocal Beef Cattle Judging School.

He was also Chairman of the NSW State Committee and was awarded an honorary life membership of the Angus Society of Australia. In addition he was both a Director and Chairman of the Pastures Protection Board, now known as Local Land Services for a period over 25 years from 1964 – 1989, a role he relished.

Bruce judged cattle all over the country from small country shows like Kendall to Sydney Royal, and was highly respected. He most enjoyed the camaraderie with other judges, and notes his favourite people to judge with as Mary Reid – Narangullen, Margaret Gunn – 7 Bar Dot and Sue Francis – Ondiong ... all ladies of course!

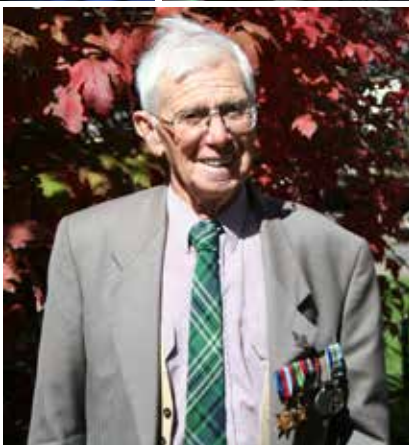

Ben Nevis was incredibly successful as an Angus stud winning Champions at Brisbane and Sydney Royal and Interbreed Champion at the 2008 EKKA, as well as topping weaner and bull sales many times in the New England throughout Bruce's life. Bruce was a colourful character around the show circuit and always enjoyed a beer with a mate.

Bruce Steel was incredibly kind and generous in educating and helping young people in the beef industry. In the 60's he and three fellow Angus breeders donated the foundation females to start the Farrer Memorial High School Angus Stud. Bruce donated one of his precious Kiwi Family cows and she would become such a star for the school that they held a red carpet benefit in her honour when she was 14 years of age.

Most notably Bruce and his wife Cherry ran Junior Heifer Shows and in 1988 ran the first ever Angus Youth Roundup in Toowoomba, which today is the most successful and well known junior beef event in the country. As a couple they were awarded the Inaugural Stewarts Award for their service to youth in the Australian Beef Industry.

Bruce is survived by his wife Cherry, daughters Julie, Kylie and Erica, seven grandchildren and eleven great grandchildren. Ben Nevis continues today as one of Australia's oldest Angus stud's and is still a family affair – run by Bruce's daughter Erica Halliday and her husband Stuart with the help of Cherry and Kylie Steel.
